

## **pressSIGN Global Print Management subscription licenses**

For larger enterprises with multiple print sites or brand's with suppliers in multiple locations. Centralise all measurements with a pressSIGN GPM Server. Set and automatically share group-wide colour targets, custom spot colours & more. Monitor and compare the performance of sites, presses, operators and consumables etc. Our GPM subscription licenses can be purchased for any of the four client types – Digital, Trends, Standard or Pro and benefit from the following additional, unique features; Synchronisation with a central multi-site pressSIGN GPM server, PantoneLIVE support, Scheduled Email Reports, uploads to a brand's Schawk! ColorDrive or X-Rite ColorCert ScoreCard server.

### **pressSIGN-Pro**

For those who want to ensure every print job meets the target standard. pressSIGN-Pro shows the operator how to adjust each ink key across the press. It enables export of tonal curves and provides powerful analysis tools to help improve quality and productivity.

### **pressSIGN-Standard**

Designed for manual process standardisation, curve exports and of particular benefit where automation is not possible, such as web offset, gravure, flexo and screen printing.

### **pressSIGN-Trends**

For users who need to review the colour quality measurements captured by any of the other three client types, so they can offer suggestions, update correction curves, create or import new targets or spot colours and create PDF reports etc. Typically used in the prepress, production and quality departments.

### **pressSIGN-Digital**

Low cost version for those who want to measure any kind of sheet, compare against a target of their choice, adjust the curves in a digital RIP if needed and make a PDF report.
